## INDEX

Name: Kishor Neupane

Subject: DSA

Roll no: 8130030

| Lab No. | Lab Title                                                                                        | Practical Date: | Submission Date/Sign |
|---------|--------------------------------------------------------------------------------------------------|-----------------|----------------------|
| 1.      | Write a menu driven program for array implementation of stack.                                   |                 |                      |
| 2.      | Write a menu driven program for array implementation of linear queue.                            |                 |                      |
| 3.      | Write a menu driven program for array implementation of Circular queue.                          |                 |                      |
| 4.      | Write a menu driven program for array implementation of Min Priority queue.                      |                 |                      |
| 5.      | Write a program in C to convert given valid infix to postfix expression by using stack.          |                 |                      |
| 6.      | Write a program in C to evaluate given postfix expression by using stack.                        |                 |                      |
| 7.      | Write a program in C to find factorial of given number by using recursion.                       |                 |                      |
| 8.      | Write a program in C to generate Fibonacci series up to $n^{\text{th}}$ term by using recursion. |                 |                      |
| 9.      | Write a program in C to simulate TOH problem by using stack.                                     |                 |                      |
| 10.     | Write a program in C to find sum of n-natural number by using tail recursion.                    |                 |                      |
