

1. pwd

Prints the full path of the current working directory.

2. ls

Lists files and folders in the current directory.

3. cd Desktop

Changes the current directory to the Desktop folder.

4. ls -all

Lists all files including hidden ones, with detailed permissions, owner, size, and date.

5. mkdir csit4

Creates a new directory named "csit4".

6. touch abc.txt

Creates a new empty file named "abc.txt".

7. vi abc.txt

Opens "abc.txt" in the vi text editor for editing.

8. ESC :wq

Exits insert mode and saves the file, then quits vi. :q! quits without saving.

9. cat abc.txt

Displays the contents of "abc.txt" on the screen.

10. sudo apt install tree

Installs the "tree" package using admin privileges.

11. tree

Displays the directory structure in a tree-like format.

12. cp src dest

Copies a file or folder from source to destination.

13. cd ..

Moves up one directory level to the parent folder.

14. mv

Moves or renames a file/folder to a new location or name.

15. chmod 773 def.txt

Changes file permissions: owner and group get read/write/execute, others get write/execute only.

16. useradd class

Creates a new user account named "class".

17. passwd class

Sets or changes the password for user "class".

18. whoami

Displays the currently logged-in username.

19. su class

Switches to another user account ("class") within the same session.

20. echo

Prints text or variable values to the terminal.

21. groupadd student

Creates a new group named "student".

22. chown :student def.txt

Changes the group ownership of "def.txt" to "student".

23. chown -R :student BSc_CSIT4

Recursively changes group ownership of a folder and its contents.

24. usermod -aG student class

Adds user "class" to the "student" group without removing existing groups.

25. chown -R class:teacher BSc_CSIT4

Recursively changes both owner and group of a folder and its contents.

26. shutdown

Shuts down the system immediately (or at a scheduled time).

27. zip

Compresses files/folders into a .zip archive.

28. unzip

Extracts files from a .zip archive.

29. rm

Deletes a file permanently.

30. find

Searches for files/directories matching a given name or pattern.

31. head

Displays the first few lines (default 10) of a file.

32. df -h

Shows disk space usage in human-readable format.

33. du -h lab.txt

Shows the disk space used by a specific file, in human-readable format.

34. man cp

Opens the manual page describing how the "cp" command works.

35. history

Shows a list of previously executed commands.
