

New Summit College

Shantinagar, Kathmandu

INDEX

Name: Kishor Neupane

Subject: Microprocessor (CSC167)

Roll no: 8130030

SN	Title	Assigned Date	Submission Date
1.	Write a program in 8085 to load value 12H, 13H, A1H in registers B, H and E respectively.		
2.	Write a program in 8085 to load value 1FH in the accumulator and copy its content in registers D and L.		
3.	Write a program in 8085 to load a value from memory location 2020H and copy it in registers D and L respectively.		
4.	Write a program in 8085 to swap the content of memory location 2020H and 2030H.		
5.	Write a program in 8085 to load a value from memory location 2090H and add it with 0AH and store the result in memory location 2092H. If carry occurs, store the carry in memory location 2091H.		
6.	Write a program in 8085 to add two values from memory location 2090H and 2092H and store the result in 2094H and store the carry in 2093H if carry occurs.		
7.	Write a program in 8085 to add two 16 bit values F1F0H and 1010H and store the result in memory location starting from 2090H and store the final carry in 2089H if final carry occurs. Also consider intermediate carry		
8.	Write a program in 8085 to multiply two 8-bit values 05H and 06H and store the result in 2080H.
