Shantinagar, Kathmandu

INDEX

Name: Kishor Neupane

Subject: Microprocessor

Roll no: 8130030

SN	Title	Assigned Date	Submission Date
9.	Write a program in 8085 to multiply values stored in memory location 2100H and 2101H and store the result in 2102H.		
10.	Write a program in 8085 to subtract two values stored at memory location 2100H and 2101H and store the result in 2102H.		
11.	Write a program in 8085 to find the sum of an array stored from memory location 2100H and store the sum in memory address 2201H and carry in 2200H if carry occurs.		
12.	Write a program in 8085 to copy a block of 5 bytes from memory location 2200H to 2300H.		
13.	Write a program in 8085 to increment the value stored at memory location 2100H and store it at 2101H.		
14.	Write a program in 8085 to find the square of a number stored at memory location 2100H.		
15.	Write a program in 8085 to perform AND operation between two values stored in memory location 2100H and 2101H and store the result at 2102H.		
16.	Write a program in 8085 to find the 1's complement of a number stored at memory location 2100H and store the result at 2101H.		
17.	Write a program in 8085 to find the largest number in an array of 10 elements stored from 2100H onwards and store the result in 2200H.		
18.	Write a program in 8085 to find the smallest number in an array of 10 elements stored from 2100H onwards and store the result in 2200H.		
19.	Write a program in 8085 to divide 20H by 04H using repeated subtraction and store the quotient and remainder in 2200H and 2201H respectively.		
20.	Write a program in 8085 to check if the number stored in memory location 2100H is even or odd, and store 01H for odd and 00H for even in 2101H.		
21.	Write a program in 8085 to add two 16-bit numbers stored at 2100H–2101H and 2102H–2103H, store the result at 2200H–2201H, and carry at 21FFH.		
22.	Write a program in 8085 to count how many times the number 0AH appears in a list of 10 numbers starting from 2100H and store the count in memory address 2200H		
23.	Write a program in 8085 to check if the value stored at memory location 2100H is even or odd. If it is even, store the value at 2102H else store the value in 2103H.		
24.	Write a program in 8085 to set the 3rd bit (bit D2) of a number stored at memory location 2100H.		
25.	Write a program in 8085 to check whether the 7th bit (MSB) of the number in 2100H is 1 or 0 and store the result in 2200H.
