This is a screenshot of the "IP Configuration" window for the PC with IP address "kishor 198.140.130.49". The window has tabs for "Physical", "Config", "Desktop", "Programming", and "Attributes", with "Config" being the active tab. Inside the "Config" tab, there's a sub-tab "IP Configuration" which is highlighted in blue. Below this, the "Interface" is set to "FastEthernet0". The "IP Configuration" section shows that the "Static" radio button is selected. The fields for "IPv4 Address", "Subnet Mask", "Default Gateway", and "DNS Server" are all filled with "198.140.130.49", "255.255.255.0", "0.0.0.0", and "0.0.0.0" respectively. The "IPv6 Configuration" section shows that the "Static" radio button is also selected. The "IPv6 Address" field is empty, followed by a slash and another empty field. The "Link Local Address" field is filled with "FE80::201:42FF:FE42:CC32". The "Default Gateway" and "DNS Server" fields for IPv6 are empty. At the bottom, under the "802.1X" section, the "Use 802.1X Security" checkbox is unchecked.
